Steam Traps

BK 45, BK 45-U, BK 45-LT, BK 46

PN 40

DN 15, 20, 25 (½", ¾", 1")

Description

When the plant is started up, the trap is fully open. Cold condensate and air are discharged. With rising temperature, the Duo (bimetallic) stainless steel plates bend and pull the stage nozzle into the closing position.

The orifice is then closed immediately below the saturation temperature. Thermodynamic processes taking place in the stage-nozzle chamber support the closing procedure.

The trap provides automatic air-venting at start-up and during operation. BK 45 and BK 46 can also be used for thermal air-venting in steam systems.

Capacity Charts

The charts show the maximum capacities for hot and cold condensate.

Curve 1

Indicates the max. capacity of hot condensate that steam traps BK 45 and BK 46 with standard regulator can discharge with virtually no banking-up.

The BK 45-U (undercooling) discharges the condensate when it is approx. 30 K (degC) below saturation temperature (banking-up of condensate).

Curve 2

Discharge capacity for cold condensate at 20 °C.

Specification Text

GESTRA Steam trap, DN 15 / DN 20 / DN 25

Type: BK 45 (1.0460)

Type: BK 45-U (1.0460, 30 K undercooling)

Type: BK 45-LT (SA350 LF2)

Type: BK 46 (1.5415)

End connection: Flanged / socket-weld ends /
butt-weld ends / screwed sockets

Nominal size: DN 15 / 20 / 25 / ½" / ¾" / 1"

Pressure rating: PN 40 / CL 150 / CL 300

Regulator: Standard, Δt approx. 15 K
(BK 45, BK 46)
U = Undercooling, Δt approx. 30 K
(only BK 45-U)

Inspection & Certification

Documentation regarding material tests and in-house examination with test report EN10204 available. All inspection requirements have to be stated with the enquiry or order. After supply of the equipment certification cannot be established. Charges and extent of the above mentioned test certificates as well as the different tests confirmed therein are listed in our Price List "Test and Inspection Charges for Standard Equipment". For other tests and inspections than those listed above, please consult us.

Application of European Directives

Pressure Equipment Directive (PED)

The equipment conforms to this directive and can be used for the following media:

- Fluids of group 2

ATEX Directive

The equipment does not have its own potential ignition source and is not subject to this directive.

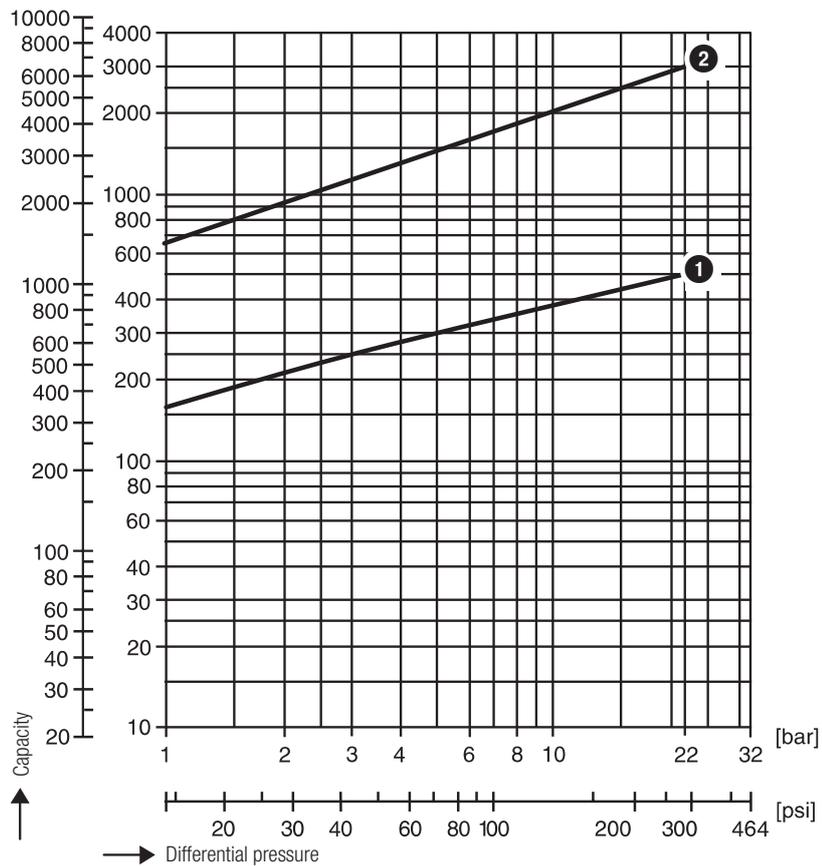

When installed, static electricity may arise between the equipment and the connected system.

When used in potentially explosive atmospheres, the plant manufacturer or plant operator is responsible for discharging or preventing possible static charge.

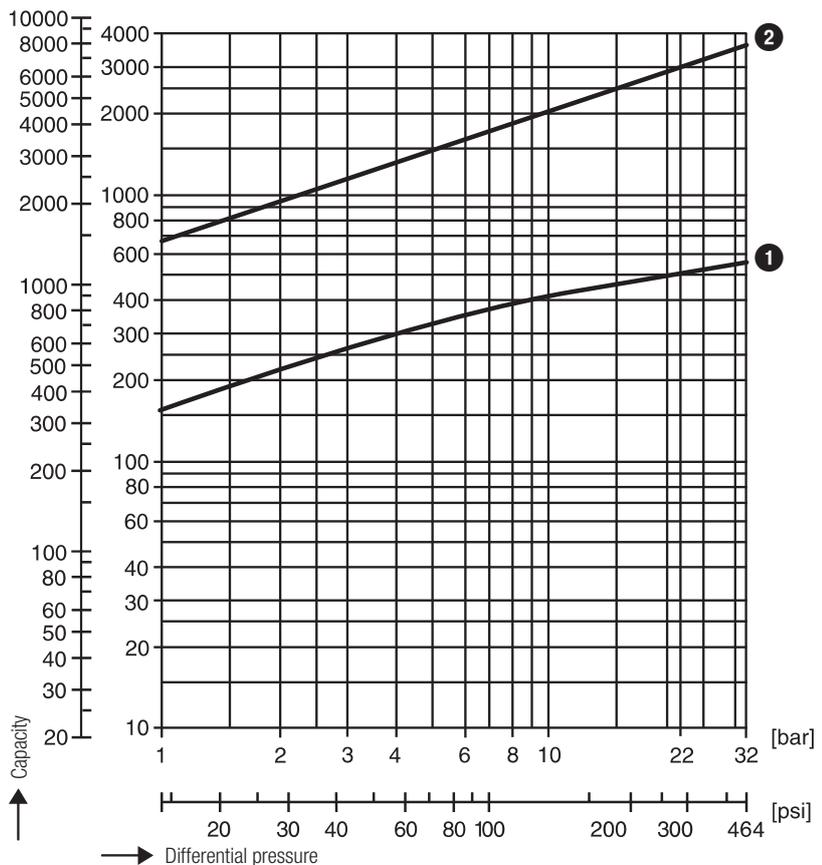

If it is possible for medium to escape, e.g. through actuating mechanisms or leaks in threaded joints, the plant manufacturer or plant operator must take this into consideration when dividing the area into zones.

Supply in accordance with our general terms of business.
